

Central Node: ICP Project Execution

- Anchors the entire diagram.
- All 12 steps branch outward in sequence, showing logical progression.

Step 1–3: Data Sourcing & Preparation

- **Step 1: Source Data** → IPO filings, DRHP, MCA, DSIR directories.
- **Step 2: Initial Cleaning** → Normalize columns, remove duplicates.
- **Step 3: Evidence Tagging** → Apply C1–C6 tags (India-based, promoters, tailwinds, etc.).

Step 4–6: Filtering & Scoring

- **Step 4: Apply ICP Filters** → Remove non-India, non-manufacturing, revenue > ₹500 Cr.
- **Step 5: Weighted Scoring** → Assign scores based on evidence strength.
- **Step 6: Shortlist Candidates** → Retain ~1500 companies for QA.

Step 7–9: QA & Verification

- **Step 7: Automated QA** → Scripts to check consistency.
- **Step 8: Manual QA** → Analyst review of evidence tags.
- **Step 9: Spot-Check** → Random sample validation for rigor.

Step 10–11: Consolidation

- **Step 10: Verified Passes** → Save icp_step10_verified.csv.
- **Step 11: Spot-Check Passes** → Save icp_step11_spotcheck.csv.

Step 12: Final Assembly

- **Merge QA-verified + spot-check files.**
- **Deduplicate by CIN** (anchor identity).
- **Apply final filters** (remove weak evidence, revenue > ₹500 Cr).
- **Normalize evidence tags** (C1–C6 standardized).
- **Generate outputs:**
 - icp_final_master.csv → full dataset.
 - icp_final_shortlist.csv → ~1000 companies.
 - icp_final_rejects.csv → removed companies with reason codes.
